

EasyAnatomy Release Notes: October 28, 2016

A message from the Chief Llama

The team at LlamaZOO is always working hard to create anatomically correct components of the canine body and are working very closely with our veterinary partners to ensure everything is satisfactory for veterinary learning purposes. As such, please be advised that you may identify some anatomical irregularities within builds but note that with the continued collaboration with our anatomist partners that these issues will be resolved for future releases of EasyAnatomy.

EasyAnatomy 0.8.5 release notes

- Added Female Urogenital system
- Updated Anatomical planes: they now focus on what is currently visible on camera
- Updated quiz camera positions and bookmarks
- Fixed a number of bugs

Additional notes from our Anatomist Team - October 28, 2016

Since the last EasyAnatomy release, the female urogenital system has been added. While most of the externally visible structures are present, some fine-tuning is still in progress. NAV terms will also be added to the information panels.

Additional work in progress includes improved accuracy and usability of current content, a complete spell check of written content in the information panels, and new content creation.
