

EasyAnatomy Release Notes: November 23, 2016

A message from the Chief Llama

The team at LlamaZOO is always working hard to create anatomically correct components of the canine body and are working very closely with our veterinary partners to ensure everything is satisfactory for veterinary learning purposes. As such, please be advised that you may identify some anatomical irregularities within builds but note that with the continued collaboration with our anatomist partners that these issues will be resolved for future releases of EasyAnatomy.

EasyAnatomy 0.8.7 update notes

- New Search Feature
- Improved and Enhanced Graphics
- Custom Graphics for Windows and OSX
- Fixed a number of bugs

Additional notes for this update

Since the last EasyAnatomy release, we've added a new search feature that lets you look for any structure so long that it currently includes written content. We will be improving search, so expect new features. We also revamped our graphics and added the ability to customize your own. Play with them and choose the settings for best performance and/or quality.
